

Sigma ERP — Accounting Module

REST API Reference Documentation

Base URL: <https://sigma-api.runasp.net/api/V1>

Generated: June 08, 2026

Account Controller — /account

Manages the chart of accounts tree (create, update, delete, fetch hierarchy).

Endpoints Overview

POST	https://sigma-api.runasp.net/api/V1/account/create-account	Create a new account
PUT	https://sigma-api.runasp.net/api/V1/account/update-account/{accountId}	Update account name
PUT	https://sigma-api.runasp.net/api/V1/account/reporting/{accountId}	Update reporting side settings
DELETE	https://sigma-api.runasp.net/api/V1/account/delete-account/{accountId}	Delete a leaf account
GET	https://sigma-api.runasp.net/api/V1/account/full-tree-structure	Get full account tree
GET	https://sigma-api.runasp.net/api/V1/account/subtree/{parentId}	Get sub-tree for a parent
GET	https://sigma-api.runasp.net/api/V1/account/settings	Paginated account settings list

POST /account/create-account

Creates a new account. Parent account becomes a non-leaf node automatically.

Request Body (application/json)

Field	Type	Description
code	string *required*	Account code. Must start with parent's code if parentId provided. First digit determines type: 1=Asset, 2=Liability, 3=Equity, 4=Revenue, 5=OpEx, 6=Admin
name	string *required*	Display name of the account
parentId	GUID optional	Parent account ID. Omit for root accounts

Responses

Field	Type	Description
id	GUID	Account identifier
code	string	Account code
name	string	Account name
isLeaf	boolean	True if no children
level	integer	Depth in tree (root = 1)
children	AccountTreeDto[]	Nested child accounts

GET /account/subtree/{parentId}

Returns the sub-tree rooted at the given parent.

Parameter	Type	Description
parentId	GUID	Parent account ID

GET /account/settings

Paginated list of accounts with their report-side settings.

Query Parameters

Parameter	Type	Description
searchTerm	string optional	Filter by name or code
pageNumber	integer (default 1)	Page number
pageSize	integer (default 10)	Items per page

Response (PagedResponse<AccountSettingListDto>)

Field	Type	Description
id	GUID	Account ID
code	string	Account code
name	string	Account name
incomeStatementSide	AccountReportSide	Income statement report side
profitLossSide	AccountReportSide	Profit & loss report side
isGroupedInTrialBalance	boolean	Trial balance grouping flag

RestrictionType Controller — /restrictiontype

Manages restriction (journal entry) types: manual or event-driven, with default debit/credit account mappings.

Endpoints Overview

GET	https://sigma-api.runasp.net/api/V1/restrictiontype	List all restriction types
GET	https://sigma-api.runasp.net/api/V1/restrictiontype/{id}	Get restriction type by ID
POST	https://sigma-api.runasp.net/api/V1/restrictiontype	Create a new restriction type
PUT	https://sigma-api.runasp.net/api/V1/restrictiontype/{id}	Update an existing restriction type
DELETE	https://sigma-api.runasp.net/api/V1/restrictiontype/{id}	Delete a restriction type

GET /restrictiontype

Returns a list of all restriction types.

Response (RestrictionTypeDto[])

Field	Type	Description
id	GUID	Restriction type ID
name	string	English name
nameAr	string	Arabic name
accountingEvent	enum	Linked accounting event
isManual	boolean	True = manually created entry
isActive	boolean	Whether type is active
defaultDebitAccountId	GUID?	Default debit account
defaultCreditAccountId	GUID?	Default credit account

GET /restrictiontype/{id}

Returns a single restriction type.

Parameter	Type	Description
id	GUID	Restriction type ID

POST /restrictiontype

Creates a new restriction type.

■■■ *Note: CreateAsync is not yet implemented — endpoint returns 501.*

Request Body (RestrictionTypeCreateDto)

Field	Type	Description
name	string	English name
nameAr	string	Arabic name
accountingEvent	enum	Accounting event type
isManual	boolean	True for manual entries
isActive	boolean	Enable/disable the type
defaultDebitAccountId	GUID?	Optional default debit account ID
defaultCreditAccountId	GUID?	Optional default credit account ID

PUT /restrictiontype/{id}

Updates an existing restriction type. Uses same body as POST.

Parameter	Type	Description
id	GUID	ID of restriction type to update

Request Body — same as POST (RestrictionTypeCreateDto)

Responses

Status	Meaning
200 OK	Returns updated RestrictionTypeDto
404 Not Found	■■■■ ■■■■■ — Type not found

DELETE /restrictiontype/{id}

Permanently deletes a restriction type.

Parameter	Type	Description
id	GUID	ID to delete

Responses

Status	Meaning
200 OK	■■ ■■■■■ ■■■■■ — Deleted successfully
404 Not Found	■■■■ ■■■■■ — Not found

Common Response Wrapper — ApiResponse

All endpoints return responses wrapped in a standard ApiResponse envelope.

Field	Type	Description
statusCode	integer	HTTP status code (200, 400, 404, 500 ...)
isSuccess	boolean	True on success
message	string	Human-readable Arabic/English message
data	T null	Response payload (null on error)

Example — Success

```
{ "statusCode": 200, "isSuccess": true, "message": "تمت العملية بنجاح", "data": null }
```

Example — Error

```
{ "statusCode": 400, "isSuccess": false, "message": "البيانات غير صحيحة", "data": null }
```
