SIGMA ERP

Accounting Module — API Reference

Version	V1
Format	JSON
Auth	Bearer Token (JWT) — required on all endpoints
Generated	June 14, 2026

Table of Contents

#	Section	Endpoint / Route
1	Journal Entries	`/api/V1/JournalEntries`
2	Posting & Unposting	`/api/V1/Posting`

■ 1. Journal Entries

The Journal Entries controller manages manual accounting entries in Sigma ERP. All routes are prefixed with `/api/V1/JournalEntries`.

GET https://sigma-api.runasp.net/api/V1 /JournalEntries

DESCRIPTION

Retrieve a paginated and filtered list of all journal entries.

QUERY PARAMETERS

Parameter	Type	Required	Description
`pageNumber`	*int*	**No**	Page number (default: 1)
`pageSize`	*int*	**No**	Items per page (default: 10)
`from`	*DateTime*	**No**	Filter entries from this date (ISO 8601)
`to`	*DateTime*	**No**	Filter entries up to this date (ISO 8601)
`status`	*enum*	**No**	Filter by status: Draft | Posted
`source`	*enum*	**No**	Filter by source: Manual | System
`customerId`	*Guid*	**No**	Filter by customer ID
`agentId`	*Guid*	**No**	Filter by agent ID
`workerId`	*Guid*	**No**	Filter by worker ID
`restrictionTypeId`	*Guid*	**No**	Filter by restriction type ID

SUCCESS RESPONSE — 200 OK

Field	Type	Description
`success`	*bool*	true
`statusCode`	*int*	200
`data.items`	*JournalEntryDto[]*	Array of journal entry summaries
`data.totalCount`	*int*	Total number of matching records
`data.pageNumber`	*int*	Current page number
`data.pageSize`	*int*	Page size used

POST https://sigma-api.runasp.net/api/V1/JournalEntries

DESCRIPTION

Create a new manual journal entry. The entry is saved with **Draft** status and must be posted separately.

REQUEST BODY (application/json)

Parameter	Type	Required	Description
`date`	*DateTime*	Yes	Entry date (ISO 8601)
`description`	*string*	Yes	Narrative / description of the entry
`customerId`	*Guid?*	Yes	Associated customer (optional)
`agentId`	*Guid?*	Yes	Associated agent (optional)
`workerId`	*Guid?*	Yes	Associated worker (optional)
`employeeId`	*Guid?*	Yes	Associated employee (optional)
`restrictionTypeId`	*Guid?*	Yes	Restriction type reference (optional)
`lines`	*JournalEntryLineDto[]*	Yes	Array of debit/credit lines (minimum 2)
`lines[].accountId`	*Guid*	Yes	Chart of account ID for this line
`lines[].debit`	*decimal*	Yes	Debit amount (0 if credit line)
`lines[].credit`	*decimal*	Yes	Credit amount (0 if debit line)
`lines[].description`	*string?*	Yes	Optional line-level description

> ***Note:*** *Total debits must equal total credits. Entry will be rejected if unbalanced.*

SUCCESS RESPONSE — 200 OK

Field	Type	Description
`success`	*bool*	true
`statusCode`	*int*	200
`data`	*Guid*	ID of the newly created journal entry

GET https://sigma-api.runasp.net/api/V1 /JournalEntries/{id}

DESCRIPTION

Retrieve full details of a specific journal entry including all its lines.

PATH PARAMETER

Parameter	Type	Required	Description
`id`	*Guid*	Yes	The unique ID of the journal entry

SUCCESS RESPONSE — 200 OK

Field	Type	Description
`data.id`	*Guid*	Entry unique identifier
`data.entryNumber`	*string*	Auto-generated entry number (e.g. JE-00042)
`data.date`	*DateTime*	Entry date
`data.description`	*string*	Entry description
`data.status`	*enum*	Draft | Posted
`data.source`	*enum*	Manual | System
`data.totalDebit`	*decimal*	Sum of all debit lines
`data.totalCredit`	*decimal*	Sum of all credit lines
`data.isBalanced`	*bool*	true if totalDebit == totalCredit
`data.customerId`	*Guid?*	Associated customer (if any)
`data.agentId`	*Guid?*	Associated agent (if any)
`data.workerId`	*Guid?*	Associated worker (if any)
`data.employeeId`	*Guid?*	Associated employee (if any)
`data.restrictionTypeId`	*Guid?*	Restriction type (if any)
`data.createdBy`	*string*	User ID who created the entry
`data.createdDate`	*DateTime*	Creation timestamp
`data.lines`	*array*	Array of journal entry lines
`data.lines[].accountId`	*Guid*	Account ID
`data.lines[].accountCode`	*string*	Account code
`data.lines[].accountName`	*string*	Account name
`data.lines[].debit`	*decimal*	Debit amount
`data.lines[].credit`	*decimal*	Credit amount

`data.lines[].description`	*string?*	Line description

PUT https://sigma-api.runasp.net/api/V1 /JournalEntries/{id}

DESCRIPTION

Update an existing journal entry. Only entries with **Draft** status can be updated. Posted entries must be unposted first.

PATH PARAMETER

Parameter	Type	Required	Description
`id`	*Guid*	Yes	The unique ID of the journal entry to update

REQUEST BODY (application/json)

Same structure as the Create request body (see POST above).

SUCCESS RESPONSE — 200 OK

Field	Type	Description
`success`	*bool*	true
`statusCode`	*int*	200
`data`	*bool*	true on success

DELETE https://sigma-api.runasp.net/api/V1 /JournalEntries/{id}

DESCRIPTION

Permanently delete a journal entry. Only **Draft** entries can be deleted.

PATH PARAMETER

Parameter	Type	Required	Description
`id`	*Guid*	Yes	The unique ID of the journal entry to delete

SUCCESS RESPONSE — 200 OK

Field	Type	Description
`success`	*bool*	true
`statusCode`	*int*	200
`data`	*bool*	true on success

> ***Note:*** *Attempting to delete a Posted entry returns 400 Bad Request.*

■ 2. Posting & Unposting

Posting commits a Draft journal entry to the ledger, updating all affected account balances. Unposting reverses the ledger movements and returns the entry to Draft status. Requires authentication.

POST https://sigma-api.runasp.net/api/V1 /Posting/{journalId}

DESCRIPTION

Post a Draft journal entry. This operation writes ledger movements for all lines and updates running balances on each account.

PATH PARAMETER

Parameter	Type	Required	Description
`journalId`	*Guid*	Yes	ID of the journal entry to post

SUCCESS RESPONSE — 200 OK

Field	Type	Description
`success`	*bool*	true
`statusCode`	*int*	200
`data`	*bool*	true on success

ERROR RESPONSES

Field	Type	Description
`400`	*Bad Request*	Entry is already Posted, or entry is unbalanced
`404`	*Not Found*	Journal entry not found

POST https://sigma-api.runasp.net/api/V1 /Posting/{id}/unpost

DESCRIPTION

Unpost a previously posted journal entry. Reverses all ledger movements and resets account balances. Entry returns to Draft status.

PATH PARAMETER

Parameter	Type	Required	Description
`id`	*Guid*	Yes	ID of the journal entry to unpost

SUCCESS RESPONSE — 200 OK

Field	Type	Description
`success`	*bool*	true
`statusCode`	*int*	200
`data`	*bool*	true on success

Note: *System-generated entries (source = System) may not be unpostable depending on business rules.*
